

Growth and Development Economics

MA ECON AM MPE GRODEC

Content and learning outcome

Content This module starts with a broad overview about Economic Growth by documenting the staggering differences between (and within) countries and covering some of the theories that have been proposed to explain them. Further on the module focusses on smaller (but equally important) questions about nutrition, health, education and population. Methods used in modern empirical research will be explained. Lastly, some of the recent advances in the novel field of historical development will be presented.

Learning outcome This course serves as an advanced introduction to the fields of economic growth, development economics and economic history. The idea is that students learn about the fundamental paradigms and schools of thought of economics development and that they are able to think critically and proactively about issues of economic growth and development.

Teaching and learning methods
